1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-9 and 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Irie et al in view of Mohrmann et al. Irie et al discloses the claimed invention, including a single compressor which is driven by a motor when the engine is stopped. See column 4, lines 21-33. However, Irie et al does not disclose the sensors coupled to monitor selected parameters associated with the motor vehicle. Mohrmann et al teaches a hybrid compressor system for a motor vehicle. The system includes a controller which is coupled to sensors for monitoring selected parameters associated with the vehicle. See, for example, column 4, lines 4-8. It would be obvious to provide Irie et al with a controller which controls the compressor system by monitoring selected parameters associated with the engine, in view of Mohrmann et al, for the purpose of more accurately controlling the compressor system.
3. Claims 10 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Irie et al in view of Mohrmann et al as applied to claim 1 above, and further in view of Ieda et al. Irie et al as modified above by Mohrmann et al discloses the claimed invention except for the sensor for monitoring the engine speed. Ieda et al teaches vehicle air conditioning system which includes an engine speed sensor. See column 6, lines 60-64. It would be obvious to provide Irie et al with an engine speed sensor, in view of Ieda et al, for the purpose of letting the user know what the engine speed is.

4. Claims 17-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Applicant's arguments with respect to claims 1 and 11 have been considered but are moot in view of the new ground(s) of rejection.
